

# What do they all have in common?

They are all at increased risk for an infection called pneumococcal disease

- **Pneumococcal disease** can cause pneumonia, meningitis, or bloodstream infection (sepsis), which can lead to **severe complications, hospitalizations, or death**

Getting vaccinated is the safest, most effective way to protect yourself

Nearly **one million people** get pneumococcal pneumonia in the US every year and 5 to 7 percent of them die.

**Pneumococcal meningitis and bloodstream infection are less common, but more deadly.**

One in every four to five people over the age of 65 who get it will die

**Ask your healthcare provider about pneumococcal vaccination today**

Medicare and most private insurers cover the cost of vaccination for those who need it

**Medical Office**

**Pharmacy**

Everyone 65 and older and all adults with certain health conditions are at risk
