

HEPATITIS B: ARE YOU AT RISK?

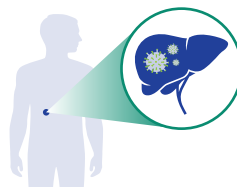

HEPATITIS B IS A SERIOUS & DEADLY DISEASE

Hepatitis B virus infects people of all ages & as many as

2.2M people

in the US are chronically infected

Up to 40%

of chronic infections lead to cirrhosis, liver failure, and liver cancer, which may lead to death

HEPATITIS B IS EASILY SPREAD

Hepatitis B is

50 to 100X more

infectious than HIV and can live

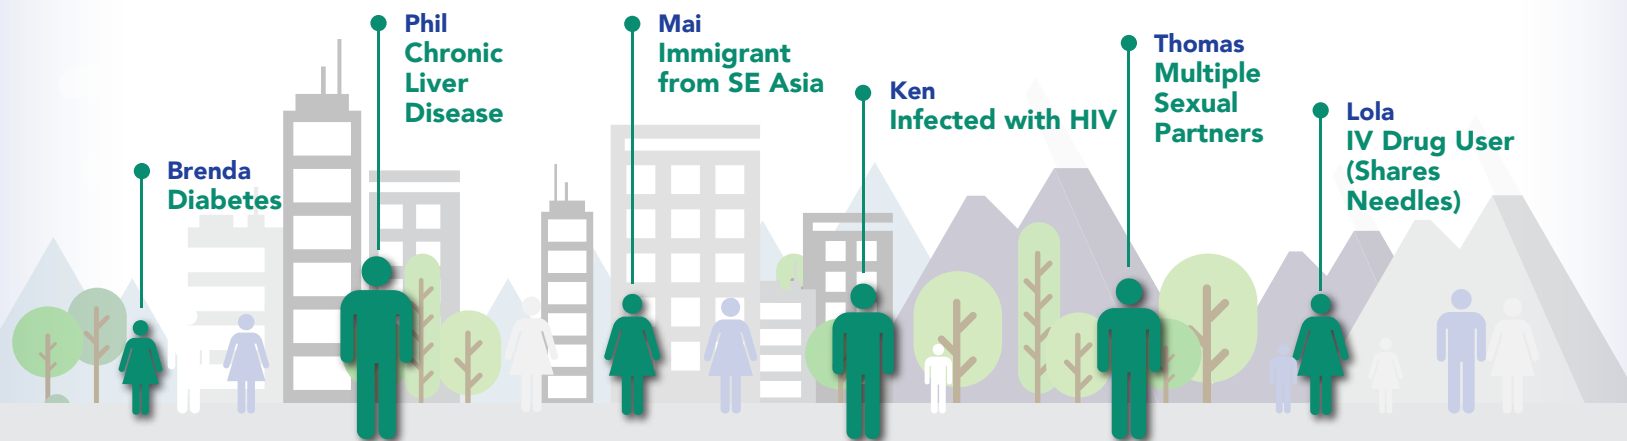

outside the body for **7+ days**

and still cause infection

2/3 of those living with chronic hepatitis B do not know they are infected but can still spread the virus to others

MANY ADULTS ARE AT RISK

SAFE & EFFECTIVE VACCINES ARE AVAILABLE

Only 25% of US adults get vaccinated

against hepatitis B as recommended by the Centers for Disease Control & Prevention (CDC)
