

# Influenza Vaccination Coverage by Population

■ 2019–2020 season ■ 2020–2021 season

Receipt of ≥ 1 dose of influenza vaccine during the season; for estimates of flu vaccination coverage among pregnant women, the data reflects methodology changes made to better control for bias

Source: Centers for Disease Control and Prevention

While overall 2020-2021 flu vaccination coverage remained similar to the previous season, there were concerning decreases among children and healthcare professionals, and disparities by race/ethnicity increased.

**Vaccination is the best way to protect against flu and related complications.**
