VACCINES ARE NOT JUST FOR CHILDREN
ADULTS 65+ CAN BE PROTECTED FROM DEADLY DISEASES

Higher risk of complications from many vaccine-preventable diseases

- ~1 in 3 US adults will develop shingles during their lifetime, and older adults are at greater risk of hospitalization and other severe complications
- 6X higher risk of dying from flu and related complications
- The risk of hospitalization from pneumococcal pneumonia is more than 6X greater for adults 65+

Talk with your healthcare professional about vaccines recommended for older adults
