COVID-19 VACCINATION IS RECOMMENDED FOR CHILDREN AGE 5 YEARS AND OLDER

Children can be protected from many vaccine-preventable diseases

Vaccines are the best way to protect children and prevent them from spreading infectious diseases to those around them.

Multiple vaccines may be given at the same time—including COVID-19, flu, and others—making it convenient to stay up to date on all recommended vaccines.

Talk to your healthcare professional to ensure your children are protected.
