VACCINES ARE NOT JUST FOR CHILDREN
ADULTS 65+ CAN BE PROTECTED FROM DEADLY DISEASES

Higher risk of complications from many vaccine-preventable diseases

~1 in 3 US adults will develop shingles during their lifetime, and older adults are at greater risk of hospitalization and other severe complications

6X higher risk of dying from flu and related complications

The risk of hospitalization from pneumococcal pneumonia is more than 6X greater for adults 65+

Talk with your healthcare professional about vaccines recommended for older adults
